

China in Six Coordinate Systems

WGS84

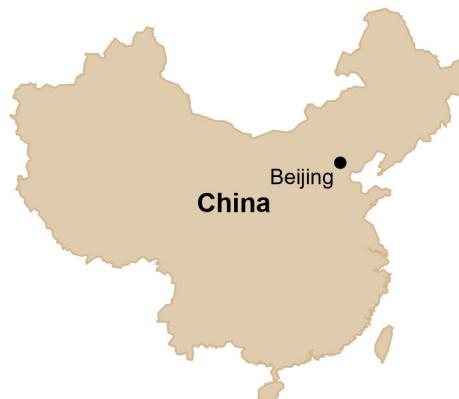

UTM Zone 50N

Mercator

Albers Equal Area Conic

Lambert Conformal Conic

Equidistant Conic

WGS84: Linear horizontal stretch that doesn't follow spherical shape. UTM Zone 50N: Strong vertical stretch that bends past spherical into conical stretch. Mercator: Vertical compression that forces horizontal stretch that doesn't follow spherical shape. Albers Equal Area Conic: Strongly follows spherical shape. Lambert Conformal Conic: Spherical stretch that doesn't continue past the meridian. Equidistant Conic: Compresses vertically. Albers Equal Area Conic is the best projection to use for visualizing China accurately.
